New Street Trees Crawley and Nedlands

**URBAN FOREST INFILL STREET TREE
PLANTING PROGRAM 2020**

How can I help?

The City of Perth is responsible for all trees planted within city streets. To maximise success each tree is given additional care and management for the first three years after planting. This includes watering once to twice a week during the spring, summer and autumn months.

The role of the community is important. You can assist the City by letting us know if trees are struggling or have been damaged, and by carrying out additional watering during the summer months. Please apply water directly to the base of the tree to give it the best chance of survival.

Where can I find out more?

More information about new tree planting, tree trials and the City of Perth Urban Forest Plan can be found at:

engage.perth.wa.gov.au

This publication is available in alternative formats and languages upon request.

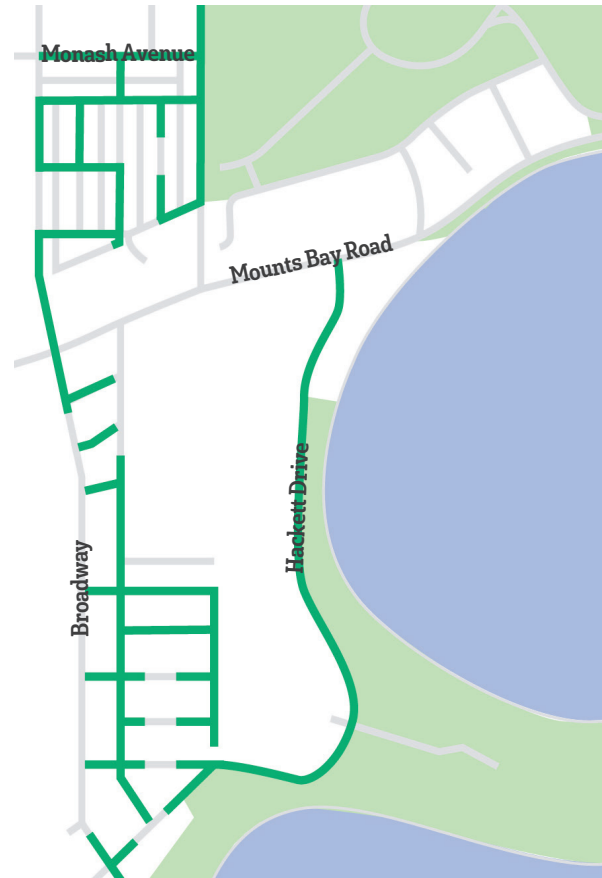

As part of the Urban Forest Plan the City of Perth will be planting new street trees in Crawley and Nedlands between April and October 2020 with the aim of:

- Filling in gaps within existing street tree planting
- Helping cool streets
- Improving green links
- Beautifying neighbourhood streets
- Promoting community health and wellbeing

Where will you be planting?

- | | |
|------------------|-------------------|
| • Broadway | • Kanimbla Road |
| • Caporn Street | • Karella Street |
| • Clark Street | • Megalong Street |
| • Cook Street | • Monash Avenue |
| • Cooper Street | • Myers Street |
| • Edward Street | • Park Road |
| • Everett Street | • Parkway |
| • Fairway | • Princess Road |
| • Hackett Drive | • Tareena Street |
| • Hampden Road | • The Avenue |
| • Hardy Road | • Winthrop Avenue |

Which tree species will be planted?

Street tree species are determined by the City of Perth Street Tree Guide. In general, new planting will match the existing tree species most commonly found within each street. The main species selected for Crawley and Nedlands include:

- *Eucalyptus rudis* - Flooded Gum
- *Eucalyptus marginata* - Jarrah
- *Gleditsia triacanthos* - Honey Locust Shademaster
- *Eucalyptus torquata* - Coral Gum

Trial trees

A limited number of new tree species will be trialled in selected streets, helping to improve the health and resilience of the urban forest.

When will planting take place?

To maximise successful tree establishment and growth new trees are planted during the cooler months (April to October). Infill planting will begin in paved footpaths and road medians. This will be followed by tree planting in streets with green verges or medians.

In some instances, site investigation works may take place prior to tree planting to locate underground services and test soils.

What to expect?

This work is generally low impact but the City aims to minimise disruption to adjoining residents and businesses during planting of new street trees.
