New Street Trees West Perth

**URBAN FOREST INFILL STREET TREE
PLANTING PROGRAM 2019**

How can I help?

The City of Perth is responsible for all trees planted within city streets. To maximise success each tree is given additional care and management during the first two years after planting. This includes weekly watering throughout the summer months and fortnightly watering during the winter months.

The role of the community is important. You can assist the City by letting us know if trees are struggling or have been damaged, and by carrying out additional watering during summer months. Please apply water directly to the base of the tree to give it the best chance of survival.

Where can I find out more?

More information about new planting and the City of Perth Urban Forest Plan can be found at:

engage.perth.wa.gov.au

This publication is available in alternative formats and languages upon request.

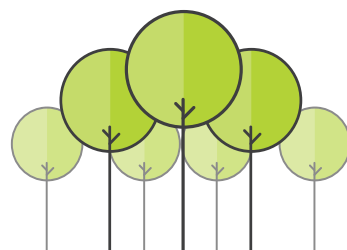

As part of the Urban Forest Plan the City of Perth will be planting new street trees in West Perth between April and October 2019 with the aim of:

- Filling in gaps within existing street trees
- Increasing canopy cover by 10% (approximately)
- Helping cool streets
- Improving green links
- Beautifying city streets
- Promoting community health and wellbeing

Where will you be planting?

- Campbell Street
- Colin Grove
- Colin Street
- Cook Street
- Delhi Street
- Harvest Terrace
- Havelock Street
- Hay Street
- Murray Street
- Ord Street
- Outram Street
- Prowse Street
- Rheola Street
- Richardson Street
- Thelma Street
- Troode Street
- Ventnor Avenue
- Walker Avenue
- Wellington Street

**10% increase
in canopy cover is
our target**

Which tree species will be planted?

New street tree species are determined by the City of Perth Street Tree Framework. In general, new tree planting will match existing tree species most commonly found within each street. The main species selected for West Perth include:

- *Agonis flexuosa* - WA Peppermint
- *Corymbia maculata* - Spotted Gum
- *Gleditsia triacanthos* - Honey Locust Shademaster
- *Jacaranda mimosifolia* - Jacaranda

When will planting take place?

To maximise successful tree establishment and growth new trees are planted during the winter months (April to October). Infill planting will generally begin in streets with green verges or medians. This will be followed by tree planting in streets with paved footpath areas.

In some instances site investigation works may take place prior to tree planting to locate underground services and test soils.

What to expect?

This work is generally low impact but the City aims to minimise disruption to adjoining businesses and residents during planting of the new street trees.
